Profile

I am a tech enthusiast, autodidact software engineer. I started my career more than 20 years ago as a website developer and now I have specialized in mobile application development.

Experience

Mobile iOS Engineer, Konfío, Mexico City

Mar 2020 – Jan 2021

I collaborated in the development of the native Konfío iOS application where the client accesses their loan and credit card information. I learned to implement new features of the Konfío app within an extended MVC architecture based on reactive components using the RxSwift framework.

Full-stack Developer, Konfío, Mexico City

Aug 2019 – Feb 2020

I collaborated giving maintenance and support to the Konfío web application <https://konfio.mx>. I developed with PHP code using the Zend framework, new features in the customer acquisition funnel. I created new partner landing pages with React. For every new feature I released in production, monitor its performance from AWS CloudWatch. I developed the POC for the Konfío app for iOS and Android using the Flutter SDK.

Full-stack Developer, Inside-Out Analytics, Mexico City

Nov 2018 – Jul 2019

I developed with Python a few interfaces that connect with Creatio CRM to record customer leads from landing pages. The customer leads, once their contact information was registered on the landing page, will be contacted immediately when the executive advisors are notified to their email where they received the vCard (in .vcf format) with the links to make the call to the customer lead via Twilio. The call made in Twilio is registered in Creatio CRM where the processes and analysis for business intelligence are carried out.

Full-stack Developer, BTQ Design, Mexico City

May 2018 – Oct 2018

I collaborated in the development and maintenance of client and partner websites made with WordPress. I gave Apache, NGINX, PHP and JavaScript training to junior developers.
